Professional Experience

DIBBS NAV LLC | *Partner & Chief Technical Officer (prev. Data Engineer)* | Atlanta, GA **Mar 2026 - Present**

- Co-own (one-third equity) a B2B SaaS platform that helps 120+ federal contractors find and bid on Defense Logistics Agency contracts; sole developer of new features, data pipelines, and deployments.
- Built a Python ETL pipeline that loads 880K+ SAM.gov records into SQL Server each month, automating the first stage of a 40+ step manual process; covered by 94 automated tests.
- Hardened the monthly 44.6M-row DLA data import across 3 production servers, tracing a recurring load failure to 12 malformed rows and adding safeguards so bad data can no longer halt the run.
- Shipped two customer-facing features in ASP.NET, a guided onboarding flow with 29-filter search customization and a moderated user forum, both backed by automated browser tests.
- Built the company's first local development environment by restoring a 160 GB production database, and wrote the runbook for restoring and operating the platform from backups.
- Corrected a server-migration cost analysis that underestimated cloud costs by 5x, adding the missing SQL Server licensing and flagging a compatibility blocker before any commitment.
- Designing a security-first AI assistant grounded in the product's own data, with server-side keys, logged calls, and per-customer usage caps.

Papa Johns | *Total Rewards Analyst* | Atlanta, GA **Jun 2026 - Present**

- Delivered 35 projects in the first 4 months and took ownership of 6 recurring compensation and bonus processes, automating most of them end to end.
- Built Excel VBA and PowerShell tools that calculate bonus payouts for hundreds of employees each period, matching the manual process to the cent and cutting one 3-4 hour monthly task to minutes.
- Automated a monthly Workday report the team believed couldn't be automated: diagnosed the access issue, partnered with IT on the integration, and had it running in production within 8 weeks.
- Built the 2027 merit budget model for the SVP of People, a scenario-driven workbook covering 1,900 employees that reconciled within 3% of the director's independent projection.
- Built the analysis for the 2026 pay structure review, using a custom matching algorithm (86% accuracy) to link 230 orphaned job codes to market data and benchmarking 45 pay grades for 2,300 employees.
- Corrected merit pay errors for 700+ store employees through Workday bulk uploads, tracing the root causes to missing performance ratings and a faulty eligibility rule.
- Rebuilt full-year operations bonus costing for the CFO after a payroll report showed only a third of the expected cost, modeling 4 years of earnings across 450 stores.
- Built a quarterly deferred-compensation distribution tool that matched the hand-built reference 115/115 and caught a long-standing error that sent board members duplicate letters.

REPAY - Realtime Electronic Payments | *Software Sales Engineer* | Atlanta, GA **Jun 2025 - Oct 2025**

- Worked with enterprise clients, sales, and engineering teams to support custom payment integrations using REST APIs and SDKs.
- Led technical discovery calls and delivered 10+ live demos and 3 API walkthroughs for enterprise prospects and clients.
- Onboarded 20+ client integrations from kickoff to production and resolved 60+ integration issues, reducing time-to-launch.

Education

Rensselaer Polytechnic Institute (RPI)

Troy, NY | **May 2025**

Bachelor of Science in Information Technology and Web Sciences (ITWS)

Minor: Economics

GPA: 3.22/4.00

Certification: Oracle Cloud Infrastructure 2023 Certified Foundations Associate

Processes & Tools

Methodologies: Agile/Scrum, stakeholder management, Tech discovery, requirements gathering, API/AI solutions

Workday & Comp: Workday reporting, EIB loads, market pricing, Radford/Mercer/ERI surveys

Business & Productivity Tools: Microsoft PowerApps, Power Automate, SharePoint Lists, REST APIs

Cloud & Infrastructure: Microsoft Azure, AWS, Docker, Linux, Git/GitHub, pytest

Data & Databases: Pandas, NumPy, Machine Learning, SQL Server, pyodbc

Languages & Frameworks: Python, PowerShell, T-SQL, VBA, VB.NET, C#, TypeScript, JavaScript, React, Playwright
